## SPIDER

| *List of modifications* | *From:* | 01.000.23.01 / 04/02/2015 |
|---|---|---|
| | *To:* | 01.000.24.00 / 04/05/2015 |

**Module:**  No subsystem                                                     **Notes:**  7

**Note:**  M01-289

### Item Composition

When you create an item composition rule, if you select the button "Assign Item Types" and press "OK" without marking any item type, the application generated an unhandled error. Currently no error is generated because this condition is managed.

**Patch Situation**        01.000.23.01

**Note:**  M01-291

### Hidden columns format

If there were some hidden columns in the sheet and the template was enabled for format management, if the document was saved, the next time you load the columns formats were not well showed. Now the columns format is correct even if there are hidden columns.

**Patch Situation**        01.000.23.01

**Note:**  M01-292

### Unhandled column

If the grid type sheet is enabled to display excel type filters sometimes a column showing the numbers appeared to the right of all managed columns. This is a service column used to manage correctly sorting functionalities and is now permanently hidden.

**Patch Situation**        01.000.23.01

**Note:**  M01-293

### Plugin generic error

An error has been fixed: when a plugin worked for a long time (at least 5 minutes) an unhandled error could appear at the system notifications check.
Now this error is handled properly.

**Patch Situation**        01.000.23.01

**Note:**  M01-297

### Intranet users management

The product manages users imported from the intranet (Active Directory) through the functionality of DbManager application. If the installation is connected to an Active Directory server, the application will first try to authenticate the user to Active Directory and, in second instance, with the code and the password stored in the database.
The management of groups, roles and permissions remains tied to the settings stored on the database, and not from the intranet users.

**Patch Situation**        01.000.24.00

**Note:** M01-298

**Permissions management**
The Entry Points definition for the product Spider was adjusted in order to match the new permissions management defined in the DbManager application. The Entry Points are now grouped to form. The new definition and visualization of Entry Points allows a more organic of permissions to be set. Also you can view the same Entry Point between two or more roles.
To view the Entry Points for Spider Product,open the DBManager application and run the refresh command in the permission related form.

**Patch Situation**  01.000.24.00

**Note:** M01-307

**SpiderPublisher module**
The new SpiderPublisher module allows you to publish aggregated data coming from documents revisioned in Spider inside a new database. Starting from the template structure, this functionality allows you to create some database tables corresponding to the sheets you want to export: they will have a row for each item and a column for each item property (plus some fixed columns for project name and ID, document, revision etc.).Within SpiderConfigurator the 'Publisher Configurator Editor' form has been implemented, where user finds the functions for configuring the publication.

**Patch Situation**  01.000.24.00
