

# What's New?

## DB MANAGER

<i>List of modifications</i>	<i>From:</i>	01.000.16.00 / 30/03/2015
	<i>To:</i>	01.000.16.00 / 30/03/2015

**Module:** No subsystem

**Notes:** 3

**Note:** M00-31

### Permission management

The form for permissions management has been improved making it more organic and intuitive the visualization and search of Entry Points. The Entry Point list is presented grouped by roles, contexts (General, project or Utility) and position within the product menu.

The Entry Point listed on the form are shown near to the command that opens the form.

The new features of this form include "excel like" filters, multiple sorts and groupings.

For more details refer to the user manual of DbMan reported to version 01.000.16.00.

**Patch Situation** 01.000.16.00

**Note:** M00-32

### Role Assignments

The form of the roles assignments has been improved to allow a manual entry easier and more intuitive. It will be easier to assign a role on an object or on all objects of a particular type (for example, projects).

Assigning a role on a specific subject will be led by a mask that will list all objects of a particular type.

**Patch Situation** 01.000.16.00

**Note:** M00-33

### Intranet users management

It has been modified the intranet users management (Active Directory) as follows:

- the intranet settings have been moved to a separate form so you can differentiate access permissions;
- it is no longer managed the mandatory group but one or more groups are handled to import users
- The intranet Groups are no longer imported because the management of users, roles and permissions remains configured on the database.

**Patch Situation** 01.000.16.00
