Module: No subsystem

Notes: 1

Note: M01-175

Copy/paste function.

It was improved the copy/paste function on the datasheets. It is now possible to copy-paste mixed cell range (unmanaged-managed) also by selecting as first cell a cell that is not managed (such as a column header).

Patch Situation 01.000.22.00

Note: M01-176

Compare

It has been extended the 'Compare' and export datasheet function to Users with read-only permission.

Patch Situation 01.000.22.00

Note: M01-179

Compare

It has been fixed the error generated within the 'Compare' feature: it wrongly highlighted an item created in previous revisions.

Patch Situation 01.000.22.00

Note: M01-181

Glist/Plist

Within projects, template cells that contain "GList" or "Plist" activate a drop-down list when selecting the cell, to simplify the list opening; the maximum number of characters in the "GList", which permit to activates the drop-down list, is 255, so when "Glist" or "Plist" exceed this parameter it will be necessary to use the optional menu on mouse right button, 'Global List values', or directly typing the value in the cell. It has been implemented the function where User, by typing or by double clicking inside the cell, opens automatically the form containing all available values. The ' Find ' command allows filtering values containing all the typed characters. Insert the value by double clicking on it or, after selecting it, press 'enter' on your keyboard.

Note: M01-187

Default Template Editor

This feature has been deleted from Spider because the datasheets default values are now handled by the Spider Configurator module.

Patch Situation 01.000.22.00

Note: M01-189

New Project

After created a DbMan new project, User with system administrator profile displays the Spider wizard that simplifies and speeds up the project configuration related to Spider module. In this version the available PList is displayed in alphabetical order and, if there is only one Project List Rule, the wizard configures it automatically.

Patch Situation 01.000.22.00

Note: M01-200

Detach and multiple rows removing

It was implemented the function that allows to use the ' detach ' and remove multiple rows, also active by selecting multiple non-contiguous records.

Patch Situation 01.000.22.00

Note: M01-204

Filters

Filters error adjustment. The error occurred on gray-highlighted items (deleted after being used on child documents): these remained visible when applying filter 'Filter not removed rows'.

Patch Situation 01.000.22.00

Note: M01-208

Cell Permission

Within the project, is now possible to apply the write permissions (read-only, read and write and deny) to a single column (grid-type datasheet) or to a single cell (flat datasheet). To set these permissions enter in the project templates list and, using the command on the mouse right button, open the drop-down menu and select: 'Setup Cell Permission'.

The functionality is similar to the one created for the document permissions configuration.

Patch Situation 01.000.22.00

Export With Validations

This function exports the Excel file keeping the Spider data formatting structure (e.g.: cells set as 'integer' can contain ONLY integers, the Global List can contain only glist values displayed in the drop-down list, etc.). This type of export is available only when is applied to the 'SpiderConfigurator' module template.
