

# What's New?

## TMS

<i>List of modifications</i>	<i>From:</i>	01.001.03.04 / 04/10/2017
	<i>To:</i>	01.001.03.05 / 25/12/2017

**Module:** No subsystem

**Notes:** 5

**Note:** TMS-1334

The "OTP Report" has been improved: two separate columns now show the "Milestone Status Index" calculation and the "OTP Index" calculation.

**Patch Situation**      01.001.03.05

**Note:** TMS-1339

New options have been added in the "Quantity Production Chart" report: it is now possible to represent a specific time window in the Data Table and it is also possible to make the Chart start after an "X" number of periods following its actual beginning.

**Patch Situation**      01.001.03.05

**Note:** TMS-1314

The new "Get Missing Dates from P6" command has been added in the "Work Class Progress" context: it allows to retrieve the Actual dates of each Deliverable automatically from Primavera. It also prevents the manual input of Actual dates in case the progress cumulated at the date of each deliverable is inserted massively (for the first time). This new command and the existing "Get Missing Progress from P6" command guarantee a complete reconstruction of the history which has not been archived, yet, in coherence with the Schedule.

**Patch Situation**      01.001.03.05

**Note:** TMS-1340

The "Out of Range" dates check, performed during the Import Schedule Data phase, has been improved with the specific indication of the activities involved in the "Inconsistency Check" report.

**Patch Situation**      01.001.03.05

**Note:** TMS-1333

The algorithm calculating the automatic distribution of the Progress Actual between two non-consecutive Updates has been improved, making it homogeneous in all "Import Schedule Data" contexts (Import XML and Import XLS, both for Primavera and MS Project).

**Patch Situation**      01.001.03.05
